

SAFETY CHECKLIST

Before installing your SPARK:

It is critical you carefully read the appropriate installation manual. Familiarize yourself with the fireplace to insure you are ordering the correct unit for your application.

SPARK fires are easy to install provided you follow the instructions given in SPARK's Installation Manual and keep in mind these quick safety tips.

SPARK's safety Checklist:

Always check codes with your local municipality to ensure the SPARK's fireplace you've chosen is approved for use in your project.

Always hire a qualified installer such as a licensed plumber, gas fitter or professional gas fireplace installer.

Never install a SPARK vent-free fire in a bedroom or bathroom: they are not allowed in these spaces.

Always install a SPARK direct-vent fireplace with the **SPECIFIED** Duravent Direct Vent Pro product.

Please have your installer contact our technical department with any specific questions prior to receiving/installing your fireplace. We are always happy to assist and ready to give guidance.

Remember that the time to contact SPARK with questions is prior to ordering your fireplace and especially BEFORE installing/completing your project. Not doing so may result in extensive & costly repairs.
