

# SPARK Fire Ribbon Safety Screen Installation

VF 57, 58, 59 models

Locate and unwrap the safety screen supplied. Look at the fireplace face inner corners and find the notches (slots) in each corner as they will be used to attach the safety screen.

Position the upper end of the screen into the fireplace opening using the notches on two side tabs.

Rotate the bottom of the screen inward and position the center tab into the notch on the fireplace tray. Bottom side tabs should rest inside the firebox opening.

Make sure the safety screen is secured in front of the fireplace.
